## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 1\_Q6

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

Joey is learning about bitwise operations and is working on a project that involves extracting specific bits from integers. He needs to write a program that takes an integer and the number of bits N as input and outputs the value of the lowest N bits of the integer.

Help Joey in his project to understand and visualize how bitwise operations work in practical scenarios.

##### *Input Format*

The first line of input consists of an integer X, representing the given integer.

The second line consists of an integer N, representing the number of bits to extract.

### ***Output Format***

The output displays "Result: " followed by an integer representing the value of the lowest N bits of the given integer.

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: 85

2

Output: Result: 1

### ***Answer***

```
import java.io.*;
import java.util.Scanner;

class Main{
    public static void main(String args[]){
        Scanner sc= new Scanner(System.in);
        int n = sc.nextInt();
        int x = sc.nextInt();
        int no=0;
        for(int i=0;i<x;i++){
            no+=(Math.pow(2,i));
        }
        System.out.printf("Result: %d",n&no);
    }
}
```

**Status :** Correct

**Marks :** 10/10
