## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 2\_Q5

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

Ted, the computer science enthusiast, has accepted the challenge of writing a program that checks if the number of digits in an integer matches the sum of its digits.

Guide Ted in designing and writing the code to solve this problem using a 'do-while' loop.

##### ***Input Format***

The input consists of an integer N, representing the number to be checked.

##### ***Output Format***

If the sum is equal to the number of digits, print "The number of digits in N matches the sum of its digits."

Else, print "The number of digits in N does not match the sum of its digits."

Refer to the sample output for formatting specifications.

**Sample Test Case**

Input: 20

Output: The number of digits in 20 matches the sum of its digits.

**Answer**

```
import java.io.*;
import java.util.Scanner;

class Main{
    public static void main(String args[]){
        Scanner sc=new Scanner(System.in);
        int n=sc.nextInt();
        int t=n,cnt=0,sum=0;
        do{
            sum+=t%10;
            t/=10;
            cnt++;
        }while(t!=0);
        if(cnt==sum)System.out.printf("The number of digits in %d matches the
sum of its digits.",n);
        else System.out.printf("The number of digits in %d does not match the sum
of its digits.",n);
    }
}
```

**Status :** Correct

**Marks :** 10/10
